STAINLESS STEEL GRADE SELECTION - Atlas Steels

In metallurgy, stainless steel, also known as inox steel or inox from French inoxydable (inoxidizable), is a steel alloy with a minimum of 10.5% chromium content by mass and a maximum of 1.2% carbon by mass.. Stainless steels are most notable for their corrosion resistance, which increases with increasing chromium content.Additions of molybdenum increase corrosion resistance in reducing acids ...

ABSTRACT. Wrought austenitic stainless steels are widely used in high temperature applications. This short review discusses initially the processing of this class of steels, with emphasis on solidification and hot working behavior.

Martindale's Calculators On-Line Center: Materials

Welding is a fabrication or sculptural process that joins materials, usually metals or thermoplastics, by using high heat to melt the parts together and allowing them to cool causing fusion.Welding is distinct from lower temperature metal-joining techniques such as brazing and soldering, which do not melt the base metal.. In addition to melting the base metal, a filler material is typically ...

ABSTRACT. Ferritic-austenitic duplex stainless steels are part of a class of material having a two-phase microstructure, comprised of a ferritic matrix and austenitic islands, with the volumetric fractions approximately the same in these phases.

Climate change is now a major concern. The polar ice caps are reported to be melting and sea levels are rising due to an increase in the average temperature of the Earth’s atmosphere and oceans .Global warming is driven by increasing levels of tropospheric gases that contribute to the so-called greenhouse effect.
