

elements macromolecules in organisms pdf

6. What elements make up carbohydrates & lipids (symbols)? 7. Name 3 elements your body needs trace amounts of for proper functioning. The four main classes of organic compounds (carbohydrates, lipids, proteins, and nucleic acids) that are essential to the proper functioning of all living things are known as polymers or macromolecules.

Elements & Macromolecules in Organisms

Elements & Macromolecules in Organisms Most common elements in living things are carbon, hydrogen, nitrogen, and oxygen. These four elements constitute about 95% of your body weight. All compounds can be classified in two broad categories --- organic and inorganic compounds. Organic compounds are made primarily of carbon.

Elements & Macromolecules in Organisms - PDF Free Download

Most common elements in living things are carbon, hydrogen, nitrogen, and oxygen. These four elements constitute about 95% of your body weight All compounds can be classified in two broad categoriesâ€”organic and inorganic compounds. Organic compounds are made primarily of carbon. Carbon has four outer electrons and can form four bonds.

KMBT 654-20131204105628 - Steinbach Science

1. What are the 4 main elements that make up 95% of an organism? 2. What are macromolecules? 3. Name the 4 classes of macromolecules: 4. What are the building blocks or subunits of macromolecules called? 5. Name 3 elements (symbols) your body needs trace amounts of for proper functioning II.

Name: MACROMOLECULES Date: I. ELEMENTS AND MACROMOLECULES

Elements & Macromolecules in Organisms (2.3) Most common elements in living things are carbon, hydrogen, nitrogen, and oxygen. These four elements constitute about 95% of your body weight. All compounds can be classified in two broad categories --- organic and inorganic compounds. Organic compounds are made primarily of carbon.
