Recent economic and ecological issues have encouraged the development of new materials with less environmental impact, produced from renewable resources with a high level of biodegradability. Therefore, all over the world, there is rising acceptance in materials demonstrating efficient use of renewable resources.

Advanced composite materials (ACMs) are also known as advanced polymer matrix composites. These are generally characterized or determined by unusually high strength fibres with unusually high stiffness, or modulus of elasticity characteristics, compared to other materials, while bound together by weaker matrices. These are termed advanced composite materials (ACM) in comparison to the composite ...

Materials Science and Engineering: An Introduction 9e

Strength of materials, also called mechanics of materials, is a subject which deals with the behavior of solid objects subject to stresses and strains. The complete theory began with the consideration of the behavior of one and two dimensional members of structures, whose states of stress can be approximated as two dimensional, and was then generalized to three dimensions to develop a more ...
