NYC Green Infrastructure

Common approaches to mapping green infrastructure in urbanised landscapes invariably focus on measures of land use or land cover and associated functional or physical traits. However, such one-dimensional perspectives do not accurately capture the character and complexity of the landscapes in which urban inhabitants live. The new approach presented in this paper demonstrates how open-source ...

Mapping Urban Green Infrastructure: A Novel Landscape

These studies suggest that a complete Green Infrastructure may have a considerable potential for improving the health of urban residents. This assertion is based on the speculation that environmentally induced changes in physiological, emotional and cognitive processes may induce, or mediate, changes in well-being and health.

Promoting ecosystem and human health in urban areas using

Our new report highlights the importance of green infrastructure for nature. Green infrastructure is what brings our towns, cities and communities alive and makes them great places to live in. Street trees, gardens, green roofs, community forests, parks, rivers, canals and wetlands deliver a wide range of proven, tangible, and cost-effective economic, social and environmental benefits.

Towards a Green Infrastructure Framework for Greater

A green roof or living roof is a roof of a building that is partially or completely covered with vegetation and a growing medium, planted over a waterproofing membrane. It may also include additional layers such as a root barrier and drainage and irrigation systems. Container gardens on roofs, where plants are maintained in pots, are not generally considered to be true green roofs, although ...
