- Attack on a carbonyl could create a new stereocenter
2. Electrophilic attack at π -oxygen - lone pairs & pi bond help electrophilic attack - requires strong acid (H)

Chirality / k aÉa È r Ñ! | Éa t i / is a geometric property of some molecules and ions. A chiral molecule/ion is non-superposable on its mirror image. The presence of an asymmetric carbon center is one of several structural features that induce chirality in organic and inorganic molecules. The term chirality is derived from the Ancient Greek word for hand, ἰχίρμαζ-ἶ• (kheir).

Looking at the reaction profile of EAS, you will see the energy required for step 1 to proceed is very large. Like SN1 and E1 reactions, the rate-determining step (RDS) is the formation of the carbocation. Looking back at the three carbocation fates (capture a nucleophile, lose a proton and form a pi bond, or

For a chemical reaction or process an energy profile (or reaction coordinate diagram) is a theoretical representation of a single energetic pathway, along the reaction coordinate, as the reactants are transformed into products. Reaction coordinate diagrams are derived from the corresponding potential energy surface (PES), which are used in computational chemistry to model chemical reactions by ...

Alkylgrupper er funksjonelle grupper som består av karbonatomer og hydrogenatomer. Formelen for en alkylgruppe fås gjennom å ta bort et hydrogenatom fra formelen for en alkan. Navngivningen fås lger på motsvarende vis alkanene, med endelsen -an erstattet med -yl.

En chimie, l'équation de Henderson-Hasselbalch est une équation donnant le pH d'un système tamponné. Elle est notamment utilisée en physiologie et en médecine pour déterminer le pH sanguin à partir des concentrations en ion bicarbonate et en acide carbonique

Budowa cząsteczki Struktura Kekulowska. Problem budowy benzenu interesował chemików już od chwili wyodrębnienia tego związku. W 1865 r. niemiecki chemik Friedrich August Kekulé wysunął hipotezę, że benzen jest cykloheksatrienem o sześciocieczonowym pierścieniu, w którym pomiędzy atomami węgla na przemian występują wiązania pojedyncze i podwójne:
