Keras is a powerful easy-to-use Python library for developing and evaluating deep learning models.. It wraps the efficient numerical computation libraries Theano and TensorFlow and allows you to define and train neural network models in a few short lines of code.

## **Develop Your First Neural Network in Python With Keras**

The Long Short-Term Memory network or LSTM is a recurrent neural network that can learn and forecast long sequences. A benefit of LSTMs in addition to learning long sequences is that they can learn to make a one-shot multi-step forecast which may be useful for time series forecasting.

## **Multi-step Time Series Forecasting with Long Short-Term**

Course Ratings are calculated from individual students’ ratings and a variety of other signals, like age of rating and reliability, to ensure that they reflect course quality fairly and accurately.

## **Machine Learning, Data Science and Deep Learning with**

Python is based on C, it is a software development language which is deep and huge and intuitive. It is easier to learn than many other languages, and you don’t need to be totally fluent in order to make use of it for genomics or other biological ...
