Thermodynamics is the branch of physics that has to do with heat and temperature and their relation to energy and work. The behavior of these quantities is governed by the four laws of thermodynamics, irrespective of the composition or specific properties of the material or system in question. The laws of thermodynamics are explained in terms of microscopic constituents by statistical mechanics.

In thermodynamics, the bubble point is the temperature (at a given pressure) where the first bubble of vapor is formed when heating a liquid consisting of two or more components. Given that vapor will probably have a different composition than the liquid, the bubble point (along with the dew point) at different compositions are useful data when designing distillation systems.

La termodinamica Ã la branca della fisica classica che studia e descrive le trasformazioni termodinamiche indotte dal calore e dal lavoro in un sistema termodinamico, in seguito a processi che coinvolgono cambiamenti delle variabili di stato temperatura ed energia.. La termodinamica classica si basa sul concetto di sistema macroscopico, ovvero una porzione di massa fisicamente o ...

Il primo principio della termodinamica, anche detto, per estensione, legge di conservazione dell'energia, Ã un assunto fondamentale della teoria della termodinamica.. Il primo principio della termodinamica rappresenta una formulazione del principio di conservazione dell'energia e afferma che: Ã«L'energia interna di un sistema termodinamico isolato Ã costante.Ã»

Hello you all: first I assume a closed non-reactive system with $n=\text{constant}$, the system being an ideal gas. lets assume $H(U,p,V)=U+pV$ by definition and lets assume that for an ideal gas, U is a function of T only, hence $H=H(T,p,V)$.

Le génie chimique, ou génie des procédés physico-chimiques, désigne l'application de la chimie physique à l'échelle industrielle. Elle a pour but la transformation de la matière dans un cadre industriel et consiste en la conception, le dimensionnement et le fonctionnement d'un procédé comportant une ou plusieurs transformations chimiques et/ou physiques.

Génie chimique à Wikipédia

Le génie chimique est une discipline scientifique et technique qui vise à concevoir, développer, optimiser et exploiter des procédés industriels pour transformer la matière première en produits finis. Elle combine les principes de la chimie, de la physique et de l'ingénierie. Les ingénieurs chimistes travaillent sur la conception de réacteurs, de colonnes de distillation, de systèmes de séparation et de procédés de contrôle. Ils sont impliqués dans l'analyse de la faisabilité, le dimensionnement, la mise au point et l'exploitation de ces procédés, ainsi que dans l'étude des aspects économiques, environnementaux et de sécurité.
